MARKET ACTION PUZZLING. Subsidence of Demand on Price Advance-Closing Tone Steady.

New York, May 21.-Dealings in stocks today shrank to a small proportion of the recently daily average. The action of the market proved puzzling to the professional trade element. Subsidence of demand on an advance in prices is construed usually as unfavorable to the stability of the rise. The professional operators, acting on this principle, sold stocks short when the market turned dull and tried to force a reaction. Prices did not respond but showed registance without any targets. showed resistance without any increase in the animation. The rigid holding of prices at the extreme of an advance is unugual and resulted in a confused state of speculative sentiment. The supposition was prompted that most of the dealings were in the hands of operators acting in concert leaving the movement artificial to some extent and capable of the close control which was evident. The persistent rise in United States Steel was the mainstay of the advance. Traders were intimidated States Steel was the mainstay of the advance. Traders were intimidated from pursuing their attack on values. Late in the afterneon, the dealings sank to a state of stagnation. There was little to show any decided change in conditions bearing on values. There was help for the speculation in the copper stocks in the advance of the cividend rate by the Calumet and Hecla Mining company, as it was construed as an indication of improving conditions in the trade. Official changes in the Kansas City Southern directorate were believed to corroberate the expectation of closer relations between that road and the Laiou Pacific. Much of the recent speculation has been based on the assumption that a number of proposel railroad combines are in a dormant state and to be completed later. On the other hand, the movement of some of the low grade stocks of railroads in receivery hands indicated doubts of the ceivers' hands indicated doubts of the progress of reorganization plans. Some from London that interded also to reports from London that interded flotations or some American securities which have been partly underwritten abroad are being delayed owing to unfavorable conditions in that market and a feeling amongst investors not considered friendly to American securities. New York borrowings in Loudon by bankers York borrowings in London by bankers are reported to be on a very large scale, but these involve an direct participation by the lenders in the securities which figure as collateral. There was an advancing tendency in the interest rate in London and also in Paris today, and this is believed to be due a New York borrowing, which has been an influence in easing the many more market and thus bringing in two markets so at thus bringing in two markets so at the street. The

e two markets to an adjustment. The rus' shipments of gold will run to tween six and seven million dollars, but estimates of the currency move-ment indicate that the excess of re-ceipts over shipments from the in-terior has been sufficient, together with the \$1,551,000 from sub-treasury opera-tions, to overbalance the gold exports and yield a small cash gain for the banks. The intense duliness of the banks. The intense duliness of the laste market allowed some gravitation of prices to a lower level, but the closing tone was steady. Bonds were irregular. Total sales, par value, \$3,-980,000. United States bonds were unchanged on call.
